demonstrates that psychiatrists cannot reliably tell the difference between people who are sane and those who are insane. The main experiment (I) illustrated a failure to detect sanity, and the secondary study (II) demonstrated a failure to detect insanity.

Abnormal Studies | ib psych notes

Rosenhan and Seligman (1989) have suggested the following characteristics that define failure to function adequately: If more than one of these characteristics are present, a person is considered to be abnormal according to this definition.

Failure to function

Agoraphobia is an anxiety disorder characterized by fear of situations in which one might be trapped and unable to get help, especially in the event of a panic attack. Agoraphobics may avoid crowds, enclosed spaces (such as elevators and buses), or large open spaces. Like other anxiety disorders, the
