BBC - Ethics - Animal ethics: Experimenting on animals

Animal testing for human research is cruel, unnecessary, and most importantly it should be illegal. Here is a little history about animal testing and where it originated. Animal testing is used to assess the safety and effectiveness of everything from medication to cosmetics, as well as understanding how the human body works.

Animal Research for Human Benefit is Unnecessary - Free ...

In clinical testing laboratories, animals are isolated from their groups and used as a tool irrespective of their natural instincts. For the experimental procedures, either a whole animal or its organs and tissues are used. For this purpose animals are euthanized (killed) by established methods.

Alternatives to animal testing: A review - ScienceDirect

Animals themselves benefit from the results of animal testing. Vaccines tested on animals have saved millions of animals that would otherwise have died from rabies, distemper, feline leukemia, infectious hepatitis virus, tetanus, anthrax, and canine parvo virus.

Animal Testing - Pros & Cons - ProCon.org

Animal testing for SARS-CoV-2 is available for mammalian species for certain situations; testing is not currently available for amphibians, reptiles, fish, or birds. Veterinarians are strongly encouraged to rule out other, more common causes of illness before considering SARS-CoV-2 testing, especially among companion animals without a COVID-19 ...

Guidance for Veterinarians | CDC

Animal experimentation and the invasive use of animals for teaching, is inherently wrong. The use of animals in research and teaching is more about tradition and history than it is about science. Animals Australia is not opposed to 'scientific progress', but we are opposed to the use of animals in the pursuit of that progress.

Animal experimentation | Animals Australia

The support for animal testing is based largely on anecdote and is not backed up, we believe, by the scientific evidence that is out there. Despite many decades of studying conditions such as cancer, Alzheimer's disease, Parkinson's disease, diabetes, stroke and AIDS in animals, we do not yet have reliable and fully effective cures.

Arguments against animal testing | Cruelty Free International

Animal testing for veterinary studies accounts for around five percent of research using animals. Treatments to each of the following animal diseases have been derived from animal studies: rabies, anthrax, glanders, Feline immunodeficiency virus (FIV), tuberculosis, Texas cattle fever, Classical swine fever (hog cholera), Heartworm and other parasitic infections.

History of animal testing - Wikipedia

Animal - Any live, vertebrate animal used or intended for use in research, research training, experimentation, or biological testing or for related purposes. Animal Facility - Any and all buildings, rooms, areas, enclosures, or vehicles, including satellite facilities, used for animal confinement, transport, maintenance, breeding, or ...

PHS Policy on Humane Care and Use of Laboratory Animals | OLAW

Animal testing, also known as animal experimentation, animal research and in vivo testing, is the use of non-human animals in experiments that seek to control the variables that affect the behavior or biological system under study. This approach can be contrasted with field studies in which animals are observed in their natural environments or habitats.

Animal testing - Wikipedia

The use of non-human animals (hereinafter referred to as animals) in research and testing is a widely accepted practice in many industries. Millions of animals each year are subjected to painful procedures that include everything from physical mutilation to drug addiction.
