Close Up Photography Digital Photography

In close-up photography, it's important you choose a great angle. You want to portray your subject in a way that shows off its shapes and colors. And you want to take an intimate portrait - one that brings the viewer into the subject's world.

A Beginner's Guide to Stunning Close-Up Photography

Closeup shots have a shallower depth of field, so it's important to make sure the camera is focusing on the object and not the background. If you're using the Closeup scene mode, you can do this by keeping the object in the center of the frame. The focus indicator. Once the camera focuses, don't move it.

Digital Photography: Capturing Close-up Shots

Close-up photography, or macro photography, can be a very rewarding form of photographic expression. The great thing about it is that you can do this from your basement at home, if necessary. Of course you can, and should, go outdoors too and setup shots in a forest or at the sea, but you can also setup shots of everyday subjects and shoot them up close.

Getting Started Guide to Close-up Photography

Focus is very important in macro and close-up photography. Because the subject is so close to the camera and includes such great detail, a misplaced point of focus is very obvious. For instance, if you take a macro shot of a butterfly on a flower and the flower is in focus rather than the butterfly, the photograph might look awkward.

Close-Up Photography with a Digital Point and Shoot - dummies

When it comes to close-up photography there are four main ways of getting closer to your subject. Use a macro lens. Put an extension tube between lens and camera. Reverse a lens using an adapter ring (reverse lens macro). Attach a close-up lens / filter to a telephoto lens.
