Always put a space between the number and unit, e.g., 203.65 m, 457 μ m pH: The proper method for reporting pH is to place the unit before the number (pH 7); never insert the word "of" between the unit and number and avoid splitting the unit and number within a sentence - they should always go together.

Kinematic equations relate the variables of motion to one another. Each equation contains four variables. The variables include acceleration (a), time (t), displacement (d), final velocity (vf), and initial velocity (vi). If values of three variables are known, then the others can be calculated using the equations. This page demonstrates the process with 20 sample problems and accompanying ...

Choose: Speed of sound in air at a temperature of 20°C: $c = 343$ m/s or speed of radio waves and light in a vacuum: $c = 299,792,458$ m/s. The propagation speed of electrical signals via optical fiber is about 9/10 the speed of light, that is $\approx 270,000$ km/s. The propagation speed of electrical signals via copper cables is about 2/3

We often use for and since when talking about time.. for + period: a "period" is a duration of time - five minutes, two weeks, six years. For means "from the beginning of the period to the end of the period".. since + point: a "point" is a precise moment in time - 9 o'clock, 1st January, Monday. Since means "from a point in the past until now".. Look at these examples:

distance (in meters): s ; time (in seconds): t . Speed: is how much your distance s changes over time t and is actually the first derivative of distance with respect to time: ds/dt . And we know you are doing 10 m per second, so $ds/dt = 10$ m/s . Acceleration: Now you start cycling faster! You increase your speed to 14 m every second over the ...

Given that the Universe is only 13.7 billion years old, these long main sequence lifetimes for M-type stars mean that every M star that has ever been created is still on the main sequence! The Sun, a G-type star with a main sequence lifetime of ~ 10 billion years, is currently 5 billion years old - about half way through its main sequence lifetime.

In mathematics and its applications, the root mean square (RMS or rms) is defined as the square root of the mean square (the arithmetic mean of the squares of a set of numbers). The RMS is also known as the quadratic mean and is a particular case of the generalized mean with exponent 2. RMS can also be defined for a continuously varying function in terms of an integral of the squares of the ...

T is the period of oscillation (s), $f=1/T$ = frequency of oscillation (Hz) and x is the displacement (m). Using Newton's 2nd Law ($F=ma$) we can show that the Force on the object due to inertia will be: $F= -m\omega^2 x$. Using Hooke's Law for springs ($F=-kx$), we know that the force on the oscillating mass due to the springs is simply $F=-kx$
