Usability testing is a technique for evaluating a product by testing it on users. How to do it: The facilitator's responsibility is to direct the users (telling them what you want them to do), encourage them to think out loud,

watch what they do, listen carefully to what they have to say, and protect them.

Usability Testing Guide - CivicActions Handbook

Some people believe user testing is the process of validating the demand for a product, whereas usability testing determines if end-users can or cannot do what they need to do on an existing prototype. In this scenario, user testing comes before product creation, while usability testing comes later.
