...

PgBouncer is a popular connection pooler designed for PostgreSQL, but it is not enough to achieve PostgreSQL High Availability by itself as it doesn't have multi-host configuration, failover, or detection. Using a Load Balancer is a way to have

Access Free High Availability With Postgresql And Pacemaker

High Availability in your database topology.

How to Achieve PostgreSQL High Availability with pgBouncer ...

High availability for PostgreSQL databases is very important for business continuity. EDB helps you to maintain high available PostgreSQL clusters in high performance. Setup and configure PostgreSQL for HA easily.

PostgreSQL High Availability: Essential for Business ...

This page is an overview of the high availability (HA) configuration for Cloud SQL instances. To configure a new instance for HA, or to enable HA on an existing instance, see [Enabling and disabling high availability on an instance](#). HA configuration overview. The HA configuration, sometimes called a cluster, provides data redundancy.
