The powerful HearClear HC64 digital hearing aid is designed to supply the high volume levels some people need, without the feedback!. The HearClear HC64 hearing aid is what we consider to be a Super Power Behind-The-Ear hearing aid. This affordable hearing aid's great sound quality comes from HearClear HC64's onboard digital sound processor (DSP) that features 12 bands of frequency shaping.

Sound localization is a listener's ability to identify the location or origin of a detected sound in direction and distance.. The sound localization mechanisms of the mammalian auditory system have been extensively studied. The auditory system uses several cues for sound source localization, including time- and level-differences (or intensity-difference) between both ears, spectral information ...

Chapter 1: The Breadth and Depth of DSP Digital Signal Processing is one of the most powerful technologies that will shape science and engineering in the twenty-first century. Revolutionary changes have already been made in a broad range of fields: communications, medical imaging, radar & sonar, high fidelity music reproduction, and oil ...

The Breadth and Depth of DSP

Digital Signal Processing is distinguished from other areas in computer science by the unique type of data it uses: signals. In most cases, these signals originate as sensory data from the real world: seismic vibrations, visual images, sound waves, etc. DSP is the mathematics, the algorithms, and the techniques used to manipulate these signals after they have been converted into a digital form.

The Roots of DSP

The conceptual diagram of the partially implantable hearing aid. In general, most hearing aid chips have a built-in DSP, and in order to analog to digital convert (ADC) of low noise and high resolution, a sigma-delta ADC is used. However, the conventional partially implantable hearing aids restore the sigma-delta output of DSP to an

This is an update to the review of minidsp SHD that I did a couple of years ago. My tests have evolved since then and company has stated that they fixed a few issues I found in that test. The SHD costs US \$1,195 and includes a USB DAC, streaming engine (based on Volumio) and of course, DSP functions for crossover, filter and Room EQ using Dirac.

Spectral Audio Signal Processing is the fourth book in the music signal processing series by Julius O. Smith. One can say that human hearing occurs in terms of spectral models. As a result, spectral models are especially useful in audio applications.

Second, human hearing perceives not only the fundamental tones, but also many orders of harmonic content far above and beyond the fundamental. When that harmonic content is removed, the audio sounds less natural and pleasing. Higher (than 8Khz) resolution audio is both more intelligible and more pleasing to the ear.
